

Human Resources Dashboard

Problem Statement

- Attrition rate is a metric that quantifies the rate at which employees depart an organisation, whether this depart is:
 - Voluntary: When an employee chooses to leave.
 - Involuntary: When an employee is dismissed.

Usually, companies try to keep attrition rate low, except for some cases in involuntary attrition such as low-involved or under-performing employees.

Attrition Rate can be influenced by many reasons in which a data analyst should analyse and discover their impact on the overall company attrition rate.
